

Hopper Fall Prevention

Safer, more efficient access to hopper cars and hopper trucks

Increased hopper car fall prevention while improving productivity.

Our hopper car handrail system provides complete fall prevention along the entire length of one or multiple cars without the restraint of a lifeline cable.

Benefits

- Eliminates the need for fall arrest devices
- Allows personnel access to the entire top and length of the hopper car
- Easily integrates with overhead loading chutes and dust collection equipment
- Can be configured to work with multiple rail cars
- Can be configured to work with hopper cars and hopper trucks

**Designed to meet your
specific needs**

Features

- Available in both fixed and elevating models
- Hopper car handrail systems can be designed as freestanding units or attached to a suitable overhead structure
- Provides a complete cage handrail system on top of your hopper cars for safe access and fall prevention
- Units can be combined for multiple car applications
- Available in a wide variety of materials to suit most environments

- 1 Self-leveling gangway can be pneumatically, hydraulically, or manually operated
- 2 Complete 42" high handrail, midrail, and toeboard enclosure
- 3 Padded lower edge helps protect vehicle from damage
