

Truck Enclosure

Safer, more efficient access for trucks and isotainers

There are many situations that require personnel to have full access to the top of a tank truck or isotainer. Traditionally, this meant walking along the top of a slick curved surface.

The Carbis Truck Enclosure addresses this safety issue.

Benefits

- Can load tank trucks and Iso-Containers from the same unit, saving money by utilizing a single location to service various trucks
- Allows access to multiple hatch trailers from a single platform, eliminating the need to re-spot trucks, saving time and money
- Platform can be used in conjunction with multiple product loading lines—consolidating loading into a single platform saves money and time, and frees up valuable space in process areas

Designed to meet your
specific needs

- Elevating handrail is raised and lowered by hydraulics
- Self-leveling gangway helps provide safe access to the platform at any height
- Flip-up floor panels allow full access to vehicle, virtually eliminating spotting problems
- Can be retrofitted to existing platforms
- Padded lower edge helps prevent vehicle damage

Carbis – the exclusive source for the only manufacturer that makes fall prevention equipment and loading arms all under one roof.

Flip-Up Floor Panels allow access to multiple hatches located along the entire length of the vehicle you are loading or unloading
